Test 0-55 03.16

NANOCOLOR® ortho- and total Phosphate 45

Method:

Photometric determination as molybdenum blue after acidic hydrolysis and oxidation at 100–120 °C. The test is equivalent to the EPA method 365.3.

Range:	5.0-50.0 mg/L P (PO ₄ -P)	15–150 mg/L PO ₄ ^{3–}
Wavelength (HW = 5-12 nm):	690 nm	
Decomposition:	30 min at 120 °C/ 60 min at 100 °C	
Reaction time:	10 min (600 s) at 20–25 °C	

Contents of reagent set:

20 test tubes total Phosphate 45

- 1 tube NANOFIX total Phosphate 45 R2
- 1 tube NANOFIX total Phosphate 45 R3
- 1 test tube with 5 mL total Phosphate 45 R4

Hazard warning:

Reagent R2 contains sodium peroxodisulfate 20-100 %, reagent R4 contains sulfuric acid 5-15 %.

H317, H334 May cause an allergic skin reaction. May cause allergy or asthma symptoms or breathing difficulties if inhaled.

P261, P272, P280, P302+352, P304+340, P333+313, P342+311, P363 Avoid breathing dust. Contaminated work clothing should not be allowed out of the workplace. Wear protective gloves/eye protection. IF ON SKIN: Wash with plenty of water/... IF INHALED: Remove person to fresh air and keep comfortable for breathing. If skin irritation or rash occurs: Get medical advice/attention. If experiencing respiratory symptoms: Call a POISON CENTER/doctor/... Wash contaminated clothing before reuse. For further information ask for a safety data sheet.

Preliminary tests:

If the order of magnitude of the concentration in a sample is not known, a preliminary test with QUANTOFIX® Phosphate (3–100 mg/L PO_4^{3-} , REF 913 20) rapidly gives this information. From the order of magnitude the required dilution can be calculated and prepared directly.

Interferences:

Precipitations after hydrolysis can be removed by membrane filtration prior to the determination. If higher amounts of organic compounds and/or organic phosphorus compounds are present, use *NANOCOLOR® NanOx* Metal (REF 918 978) for decomposition.

The following quantities of ions will not interfere:

- $\leq 1000 \text{ mg/L S}^{2-}; \leq 500 \text{ mg/L NO}_{2}^{-}; \leq 0.1 \text{ mg/L As (only ortho-P)};$
- ≤ 1000 mg/L Cu, Fe, Si; ≤ 100 mg/L Cr(III);
- < 3000 mg/L COD (reference to potassium hydrogen phthalate).

The method ortho-P can be applied also for the analysis of sea water.

Procedure:

Requisite accessories: piston pipette with tips

total Phosphate

Open test tube, add

200 μL (= 0.2 mL) test sample (the pH value of the sample must be between pH 0 and 10) and

1 NANOFIX R2.

Screw cap back on to test tube, shake. Place tube in heating block and start heating block. After 30 / 60 min remove test tube from heating block and allow to cool down to room temperature. Add

1 NANOFIX R3 and

200 µL (= 0.2 mL) R4, mix.

Clean outside of test tube and measure after 10 min.

ortho-Phosphate

Filter sample solution.

Open test tube, add

200 µL (= 0.2 mL) test sample (the pH value of the sample must be between pH 0 and 10),

1 NANOFIX R3 and

200 µL (= 0.2 mL) R4, screw cap back on to test tube, shake.

Clean outside of test tube and measure after 10 min.

Notes:

The concentration of condensed phosphates is the difference between total phosphate without Phosphate R2 and ortho-phosphate.

Measurement:

For NANOCOLOR® photometers and PF-12 see manual, test 0-55.

Measurement when samples are colored or turbid:

For all NANOCOLOR® photometers see manual, use key for correction value.

Photometers of other manufacturers:

For other photometers check whether measurement of round glass tubes is possible. Verify factor for each type of instrument by measuring standard solutions.

Analytical quality control:

NANOCONTROL Multistandard Seepage water (REF 925 013)
