

Measuring Transducer

Technical data:

- Measuring transducer for level and temperature
- Operating voltage 24 VDC
- Analog output signal, options 4-20 mA or 0-10 V
- Cap rail housing

Applikation

- External measuring transducers serve for recording, evaluating and converting of temperature- and level signals in technical machinery or devices. Owing to customized reasons, such as consisting space, thermal requirements etc., it is often necessary to mount the measuring transducer separately from the sensor.
- Measuring transducers for level- and temperature sensors will be deployed in "Ship technology, Off-shore, Petro-chemistry, Machinery & Plant engineering, Tunneling technology, Hydraulic aggregates, Cooling systems, Food and beverage industry, Power plants and various Power systems".
